

SECTION A

Answer questions 1–30 on the answer sheet.

1. A lift in a hotel makes a return journey from the ground floor to the top floor and then back again. The corresponding velocity-time graph is shown below.

Which of the following shows the acceleration-time graph for the same journey?

2. A car travels from X to Y and then it travels from Y to Z, as shown in the following diagram.

X to Y takes a time of one hour. Y to Z also takes one hour. Which of the following is a correct list of the magnitudes of the final displacement, average speed and average velocity for the complete journey?

	<i>Displacement</i> (km)	<i>Average speed</i> (km hr <sup>-1</sup> )	<i>Average velocity</i> (km hr <sup>-1</sup> )
A	50	35	35
B	70	35	25
C	50	35	25
D	70	70	50
E	50	70	25

3. An object attached to a parachute falls from a helicopter which is hovering at a height of 120 m above point X.

The object falls with a constant vertical component of velocity of value  $12 \text{ m s}^{-1}$ . A steady side-wind gives the object a constant horizontal component of velocity of value  $5 \text{ m s}^{-1}$ .

How far from point X does the object hit the ground?

- A 24 m  
 B 50 m  
 C 60 m  
 D 120 m  
 E 150 m
4. A sledge is dragged at a **constant velocity** along the snow against a horizontal frictional force  $F$ . The rope pulling the sledge is at an angle of  $\theta$  to the horizontal, as shown.

When the sledge is moving horizontally with a constant velocity, the force  $P$  pulling the rope is equal to

- A  $F$   
 B  $F \cos \theta$   
 C  $F \sin \theta$   
 D  $\frac{F}{\cos \theta}$   
 E  $\frac{F}{\sin \theta}$

5. A ball is thrown horizontally over the edge of a cliff. When air resistance **is taken into account**, which graphs represent the horizontal and vertical components of the velocity of the ball during its flight?

	Horizontal component of velocity	Vertical component of velocity
A	graph X	graph X
B	graph X	graph Y
C	graph Y	graph X
D	graph Y	graph Z
E	graph Z	graph Z
